## **DETAILED ACTION**

### ***Status of Claims***

1. Claims 1, 28, and 30-35, filed September 21<sup>st</sup>, 2010, are currently under examination.

### ***Allowable Subject Matter***

2. Claims 1, 28, and 30-35 are allowed.

### ***Reasons for Allowance***

3. The following is an examiner's statement of reasons for allowance:

The closest prior art of Shindo (US 2003/0062261 A1) disclosed a high purity hafnium target of purity of 4N (99.99 wt%) with a Zr content of 0.5 wt% or less (para 0031, 0041, 0065, claim 1) and gas components such as C and O at 500 ppm or less (para 0030) and N present at less than 10 ppm (Table 4 para 0089). The rejections have been overcome in view of Applicant's 1.132 declaration of April 19th, 2011.

The declaration states:

that the claimed Zr content in the claimed Hf material required by the instant claims cannot be achieved using the methods disclosed in Shindo (p. 2, section 3(a)),

one or ordinary skill would have no motivation to reduce the Zr content in an Hf material because conventional wisdom was that it didn't aggravate the properties of semiconductors (p. 2, section 3(e)), and

Art Unit: 1733

that further experimentation performed by Mr. Yuichiro Shindo was unable to reduce the Zr content to 1-1000 wtppm or 1-200 wtppm relying on the process disclosed by Shindo (US '261).

Also the claimed higher level of purity of the claimed Hf materials (sputtering targets or thin films) has a different and new utility as compared to the prior art in that the claimed materials enable the production of gate-insulation film having stable permittivity (p. 6, sections 13-15).

Overall the declaration establishes that one of ordinary skill in the art would not have had a reasonable expectation of success in creating the claimed hafnium materials from the disclosure of Shindo prior art reference.

Similarly, the other cited primary reference of Murray (Preparation and Characterization of Pure Metals, ASM Handbook...) has been overcome for many of the same reasons as Shindo was overcome with the additional notes that the iodide process disclosed by Murray cannot achieve the levels of Zr in the claimed Hf materials (p. 2, section 3(b) and p. 4, section 9 and 10) as evidenced by Applicant's further experiments which failed to yield the claimed Zr content using the iodide process of Murray and there is insufficient evidence in Murray to establish that the 5N designation excludes Zr (p. 5, section 12).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 1733
